

US-29 Human Overview Testing Summary

Feature-006 dashboard filtering and drill-down · Databricks Free Edition workspace · 04–05 Oct 2026 · Tester: product owner (Renny Matis)

Result: you tested the published dashboard in four rounds. By the end, every checklist row had passed, been accepted by your decision, or did not apply (D3). Round 1 tested decision Q21, and your findings led to six more (Q22–Q27). Those decisions removed two empty filters, joined the enrolment fields into the prediction data, and rebound the charts. You then approved and merged pull request 132.

Final result by checklist row

Rows use the final checklist numbering. In round 2, the old numbering put Faculty at A2, Course Level at A3 and Study Mode at A7. "—" means the row was not re-run in that round.

Row	What you tested	Round 2	Round 3	Round 4	Final
A0	Page list and filter panel	Pass	—	—	Pass (6 filters)
A1	Risk Level = Not At Risk	Pass	—	—	Pass
A2	Course Level filter	Fail: column error	Pass	—	Pass
—	Faculty filter	Fail: only "null"	Removed (Q24)		Removed
A4	Field of Education filter	Not reported	Pass	—	Pass
A5	Origin filter	Fail: column error	Pass	—	Pass
A6	Age Band filter	Fail: column error	Pass	Confirmed	Pass
—	Study Mode filter	Fail: only "null"	Removed (Q24)		Removed
A8	Commencing/Continuing filter	Fail: column error	Pass	—	Pass
A9	Two values in one filter	Risk Level only	Pass	—	Pass
A10	Two filters together	Fail	Pass	—	Pass
A11	Clear all filters	Pass	—	—	Pass
B1	Click a Course Analysis bar	Pass	Fail: "multiple sources"	Pass	Pass
B2	Chart click plus a filter	Fail: Faculty only null	Fail: "multiple sources"	Pass	Pass
B3	Remove selections one at a time	Pass	—	Pass	Pass
B4	Gender chart click narrows nothing	Pass	—	—	Pass
B5	Click Age Band, then Origin bars	Fail: highlight only	Fail: "multiple sources"	Pass	Pass
B6	Click a Risk Score Range bar	Fail: highlight only	Pass	—	Pass
B7	Gender cell click in the Demographic table	Pass, partly	Fail: render error	Narrows to 1 student	Accepted (Q27)
C1	Drill-down table columns and sort	Pass	—	—	Pass
C2	Student ID found on the advisor page	Pass	—	—	Pass
C3	Small cohort shows in full	Blocked	Pass	—	Pass

C4	100,000-row limit; search outside it	Blocked (sort OK)	Not run as written, then "No Data"	Pass	Pass
D1	Search a student, then exclude by filter	Fail (Faculty)	Pass	—	Pass
D2	Filters that match no students	Fail: error	Pass ("No data")	—	Pass
D3	Student with no enrolment record	Blocked	Not applicable	—	Not applicable
D4	Help panel text	Pass	—	—	Pass

Round 1 — "Ignored filters" setting (Sun 04 Oct, 21:15–21:28)

You tried to switch on an "Ignored filters" setting on a throwaway test dashboard. That setting would stop clicks on the Gender column from filtering other charts.

- You could not open the dashboard in edit mode, and the named table was not in the menu. The AI's directions pointed to the wrong menu, so a test chart's type was changed by mistake; the AI corrected its directions.
- Your response:

there is no ignored filters option anywhere when i click on c_widget_ignoredfilters

- You chose Q22 = a and tried the Databricks dashboard assistant. It also could not set the option, so you asked to proceed with observing instead:

alright proceed with working on (b) then, it appears a takes too much effort to get working

Outcome: no setting was added. Checklist row B7 was added to check the Gender behaviour by hand.

Round 2 — first full checklist run (Mon 05 Oct, notes saved 02:22)

Recorded in your document "Human overview and testing of pending findings before committing to origin". Only the Risk Level filter worked fully.

- Enrolment filters errored** on every chart. Course Level, Origin, Age Band and Commencing/Continuing all showed *UNRESOLVED_COLUMN* errors, for example "name `course\_level` cannot be resolved".
- Faculty and Study Mode** offered only "All" or "null":

A2. Filtering does not work as effectively for Faculty should have more options than null.

- Chart clicks** (B5, B6) highlighted bars but did not narrow other widgets. B7 passed, but the Age Band and Origin charts did not narrow.
- Blocked rows:** C3 and C4 could not be tested because no filter could narrow below 100,000 students:

C3: Cannot do as filtering options for anything that isn't at risk or not at risk, which are both above 100,000 is impossible to filter right now.

- Passed: A0, A1, A11, B1, B3, B4, C1, C2 and D4.

Your response at 02:31:

q23 a, q24 a. However, if a filter provides an error or can only show "null" then I think the filter should be removed as it is not useful. Course Level Filter applies error on all charts, not only risk level filter and search student. All data is displayed as errors.

You then looked for the Databricks Previews page (02:36–02:39) and found it does not exist on Free Edition. You chose Q25 = a at 02:40.

Round 3 — re-test after the enrolment join (Mon 05 Oct, notes saved 03:11)

Recorded in your document "Notes on changes and reCompleting failed tests for Feature-006 US-29". All filters now worked; chart clicks did not.

- **Filters:** A2–A10 passed.

Double filtering works – ... All filters work properly.

Your screenshot showed Course Level = Postgraduate (Coursework) combined with Field of Education = HEALTH.

- **Chart clicks** (B1, B2, B5) made the other charts and tables fail with *"Filter expression references multiple sources: student_attrition_risk_prediction, Student_Enrolment_Details"*. Your note:

This is a consistent problem across all pages.

B7's Gender click caused the same error on Risk by Age Band and Risk by Origin. B6 worked.

- **C3, D1, D2** passed. D2 showed "No data" rather than 0, which you accepted.
- **D3:**

D3: Passes, so you should remove not having an enrolment record in the application from the overview page.

Every student has an enrolment record, so the row was marked not applicable and the help-panel sentence was removed.

- **C4** was not run as intended: you searched an Undergraduate student while filtered to HDR (Higher Degree by Research). That correctly showed "no data". The AI's instruction had been ambiguous.
- **Age bands:** you asked why there were only 3 bands. A read-only check found 11 bands in the data.

Your response at 03:20:

Q26. a. Regarding age bands, it is working properly now. C4. Does not work properly, I retrieved student id 64e9c59460e17c3a from the end of Not at Risk ... When I have no filters on and search for it, "No Data" is displayed.

Round 4 — re-test after the charts were rebound (Mon 05 Oct, 03:32–03:34)

You re-ran B1–B3, B5, B7 and C4. All passed or were accepted.

B1: Passes · B2: Passes · B3: Passes

[B7]: Cannot click on a gender in the students in this view, selects the student. If clicking on the gender after selecting the student, it will show 1 value, because the student is of that gender.

C4: Shows for search student on student details page for student id 64e9c59460e17c3a, but does not show on the overview page in the magnifier for Students in this view table.

- You corrected the label at 03:33: "Sorry I mean B7, B5 Passes".
- **C4** passed. Search Student on the Student List page finds a student outside the top 100,000. The magnifier inside a table only searches the up-to-100,000 rows that table holds, as its description says.
- **B7:** a click selects that one student's row, so the charts narrow to one student, never to a gender group. You accepted this as a pass (Q27 = a, 03:34).

Review and merge

After testing, you reviewed pull request 132, which contains all US-29 work, and approved it. You merged it into the main branch on Mon 05 Oct at 03:58 (merge commit 4de1f9a). US-29 is complete.

Decisions your testing drove

Q	When	Question	Your answer and what changed
Q21	04 Oct 20:50	How to stop Gender clicks in the Demographic table from filtering other charts	a) Test the "Ignored filters" setting first (round 1)
Q22	04 Oct 21:21–21:28	The setting was not offered; what next?	a) Try the assistant once, then observe first. No setting added; row B7 checks it
Q23	05 Oct 02:31	Enrolment filters error on every chart	a) Check the workspace's preview features. Free Edition has none, which led to Q25

Q24	05 Oct 02:31	Faculty and Study Mode show only "null"	a) Plus your rule: remove any filter that errors or only shows "null". Both filters removed; 6 remain
Q25	05 Oct 02:40	How to make the 5 enrolment filters work on Free Edition	a) Join the enrolment fields into the prediction data. All filters passed in round 3
Q26	05 Oct 03:20	Chart clicks fail with "multiple sources"	a) Rebind the analysis charts and tables to the joined data. Clicks passed in round 4
Q27	05 Oct 03:34	B7: a row click narrows charts to one student	a) Accept as a pass: one student is not a gender group
