

US-29 Test Update after US-27 Dashboard Changes

Team 115 · Branch `fix/us29-dashboard-tests-after-us27` · 10 October 2026

The US-27 dashboard update (commit `3fc0a9f`, 5 October) changed the Student Attrition Risk Overview layout that the US-29 and US-28 automated tests check. The agreed US-27 dashboard was kept unchanged; only the tests in `tests/test_dashboard_filtering.py` and `tests/test_dashboard.py` were updated to match it.

Before: **21 failed** · 332 passed · 14 skipped

After: **0 failed** · 345 passed · 14 skipped

Tests and fixes

Test	Why it failed (US-27 change)	Fix
<code>test_student_id_is_labelled_de_identified</code>	Two of three "Students in this view" tables removed	Expects 3 de-identified Student ID labels instead of 5
<code>test_chart_colour_map_matches_contract</code> , <code>test_chart_categorical_axis_natural_order</code> , <code>test_chart_description_shown</code> , <code>test_every_bar_chart_is_in_contract</code> (4)	Risk by Gender chart re-added under a new widget name (<code>dfe9d497</code>)	Point at <code>dfe9d497</code> ; the chart's colours, axis and description are unchanged and still checked
<code>test_all_expected_widget_titles_present</code>	Search Student filter removed	"Search Student" removed from the expected titles
<code>test_page_order</code>	Gender Breakdown page removed	Expects the five-page order
<code>test_student_list_risk_filter_replaced</code> → <code>test_student_list_page_filters</code>	Search Student replaced by six page-level filters	Checks the six Student List filters, their order and type
<code>test_sensitive_charts_are_isolated</code> → <code>test_only_gender_chart_uses_sensitive_fields</code>	Risk by Gender now shares Demographic Breakdown	Checks that only Risk by Gender and Student Details use a sensitive field; no filter on a sensitive field is still checked
<code>test_gender_chart_is_on_gender_breakdown</code> → <code>test_gender_chart_is_on_demographic_breakdown</code>	Chart moved to Demographic Breakdown	Checks its new page
<code>test_each_analysis_page_has_one_drill_table</code> , <code>test_drill_table_columns_match_contract</code> , <code>test_drill_table_uses_student_id_dimension</code> (6 cases)	Course Analysis and Demographic Breakdown tables removed	Those 8 cases (with the 2 below) retired; the Overview table is still fully checked
<code>test_drill_table_sorted_by_risk_desc_with_boundary_text</code> (3) → <code>test_drill_table_unfiltered_with_boundary_text</code>	Two tables removed; Overview table's default sort removed	Overview table checked for no fixed filter, no row limit and its description; sort check removed
<code>test_how_to_filter_panel_content</code>	Help panel replaced by a new panel (<code>ce3870dc</code>)	Checks the new panel; "Gender Breakdown" phrase replaced by "Student List"
<code>test_preserved_parts_match_base</code>	Widgets renamed or removed; three page subtitles reworded	Allows the US-27 rename, removal and subtitle edits; all other widgets must still match

Notes

- The 21st failure (`test_preserved_parts_match_base`) only runs inside a Git checkout, so the earlier interim status report listed 20.
- The total test count fell by 8 because the drill-table cases for the two removed tables were retired, not skipped.
- For US-27 review: the new help panel still says each analysis page has a "Students in this view" table listed highest risk first; only the Overview table remains, and it is no longer sorted.
- Risk by Gender previously sat on its own page so that clicking it could not narrow other charts (US-29 FR-004). With the agreed US-27 layout this should be confirmed in the Databricks workspace.
- Run with `uv run pytest` from `student_attrition_risk_app/`. One existing linter warning in `briefing_instructions.py` is outside this change.
