

Complete US-29 using this staged workflow. You are the sole Orchestrator. Worker agents must remain idle unless you explicitly assign them work.

USER STORY

US-29 — Interactive Dashboard Filtering and Drill-Down

Description:

As an Academic Advisor, I want to interactively filter and drill down into student-risk information, so that I can focus on relevant groups of students and investigate the risk information displayed by the application in greater detail.

Acceptance Criteria:

Given student risk information is displayed in the dashboard, when an Academic Advisor applies available filters or selects a relevant dashboard view, then the displayed information updates consistently with the selected criteria and allows the advisor to examine the relevant student-risk information in greater detail.

Priority: Could Have

Story Points: 8

Sprint: 6

Status: Planned

Scope: Stretch

GitHub issue/project:

WORKFLOW

1. Claude Coder — SDD

- Assign Claude Coder to run the kickoff skill in its own session. Orchestrator must not run kickoff itself.
- Perform discovery, planning and SDD creation only.

- Do not begin feature implementation.
- Claude Coder owns the kickoff interaction and must generate the project-specific kickoff questions.
- Any kickoff question requiring human judgement must be returned through Orchestrator to me.
- Orchestrator must not answer kickoff questions on my behalf, automatically select Claude's recommended option, or infer my preference.
- Wait for my response before allowing Claude Coder to continue past a required human decision.
- Routine technical actions that do not require human judgement may proceed without asking me.
- Produce an SDD handoff and report back to Orchestrator.

2. Codex SDD Reviewer — Independent Review

- Use independent-adversarial-review in SDD mode.
- Review the SDD independently against the original requirements and applicable project constraints.
- Do not modify project artifacts.
- Produce SDD_Independent_Review_Handoff.md.
- Return it to Orchestrator.

3. Claude Coder — SDD Remediation + Implementation

- Review the Codex SDD handoff.
- Resolve valid findings in the SDD.
- Implement US-29 from the corrected SDD.
- Create/update tests and run verification.
- Produce an implementation handoff and report back to Orchestrator.

4. Codex Code Reviewer — Independent Review

- Use independent-adversarial-review in Code mode.
- Review requirements, reviewed SDD, implementation and tests.
- Use independent verification and disposable fault injection where useful.
- Do not modify project artifacts.

- Produce Code_Independent_Review_Handoff.md.
- Return it to Orchestrator.

5. Claude Coder — Defect Remediation

- Review the Codex code-review handoff.
- Resolve valid findings.
- Update tests/documentation where required.
- Run the complete final verification suite.

6. Codex Closure Verification

- Reassign the relevant Codex reviewer to verify closure of accepted P0/P1/P2 findings.
- Do not modify project artifacts.
- Produce Review_Verification_Handoff.md.
- If material defects remain, return them to Claude Coder and repeat remediation/verification.

7. Claude Coder — Recap

- When implementation and review closure are complete, run the recap skill.
- Include the SDD process, implementation, Codex findings, remediation and final verification.

RULES

- Claude Coder is the only worker allowed to modify the SDD, code, tests or implementation artifacts.
- Codex SDD Reviewer and Codex Code Reviewer are review-only.
- Codex reviewers must not use Claude's conversation history, private reasoning or self-review as evidence.
- Workers must return to idle after each assigned stage.
- Do not skip SDD review before implementation.
- Do not skip code review before final recap.
- If any agent reaches a decision requiring human judgement, ask me rather than deciding on my behalf.
- Orchestrator must not answer kickoff or other human-decision questions on my behalf.

- No push, pull request, merge, or modification of main without my explicit approval.

FINAL REPORT

Report:

- whether US-29 is complete;
- final verification status;
- unresolved review findings;
- any remaining human decisions;
- paths to the final SDD, review handoffs and recap documentation;
- whether any push/PR/merge is awaiting my approval.
